

Creating technologies

Hackathon TAL – TALN/CORIA Rennes 05/2018

Christophe Servan – Research Scientist

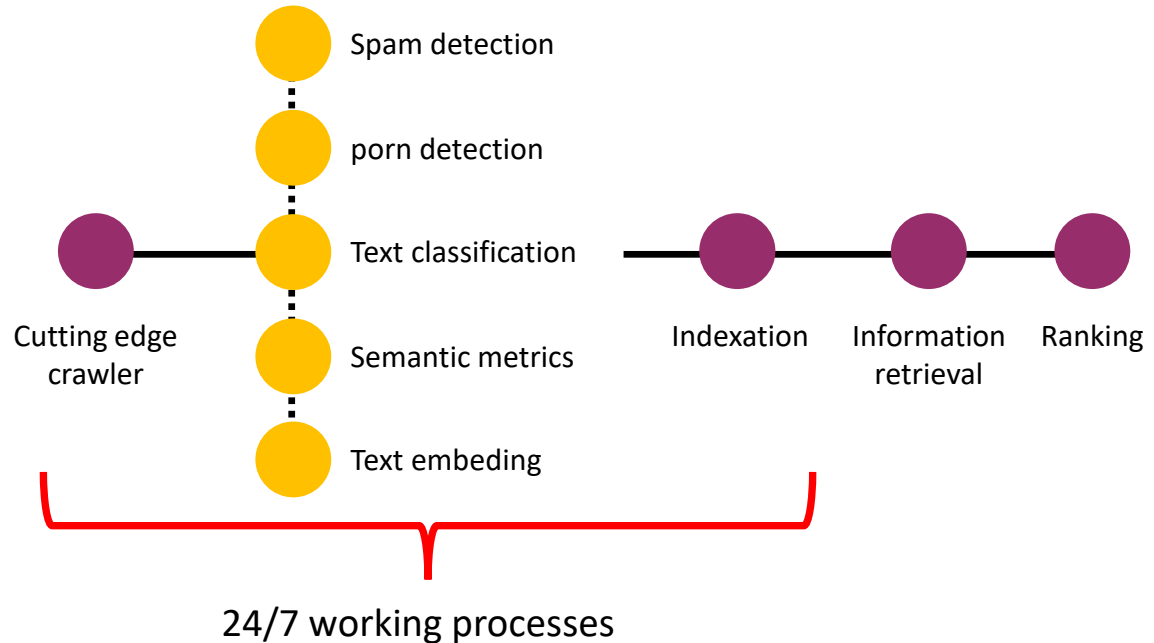

Search Engine innovation

Mixing research, data science, machine learning and engineering to build a modern search engine.

This initiative takes advantage of our strong partnership with INRIA, our technology watch regarding crawling, indexing, processing and information extraction and retrieval.

Search Engine innovation

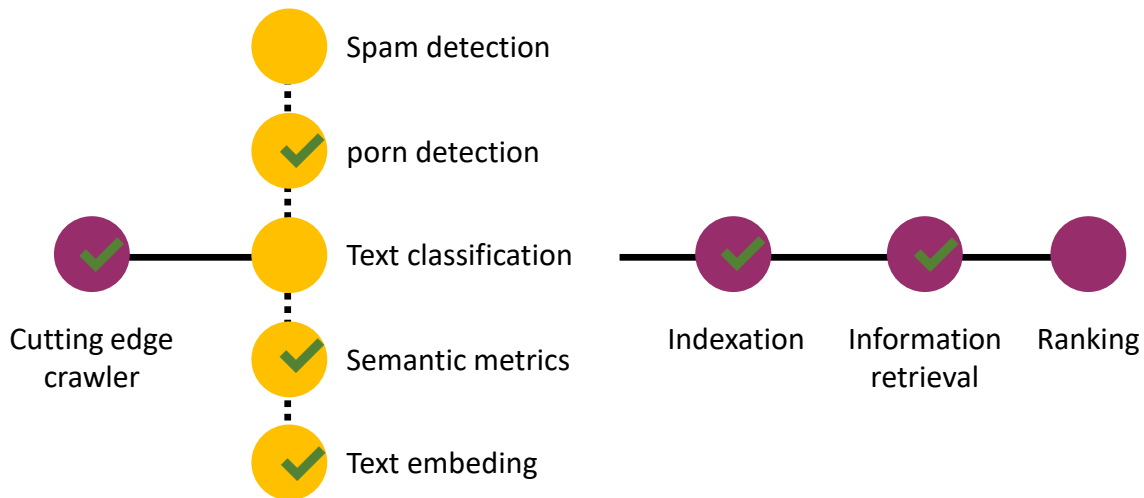

An end-to-end processing chain to innovate on every pieces

Search Engine innovation

Current status

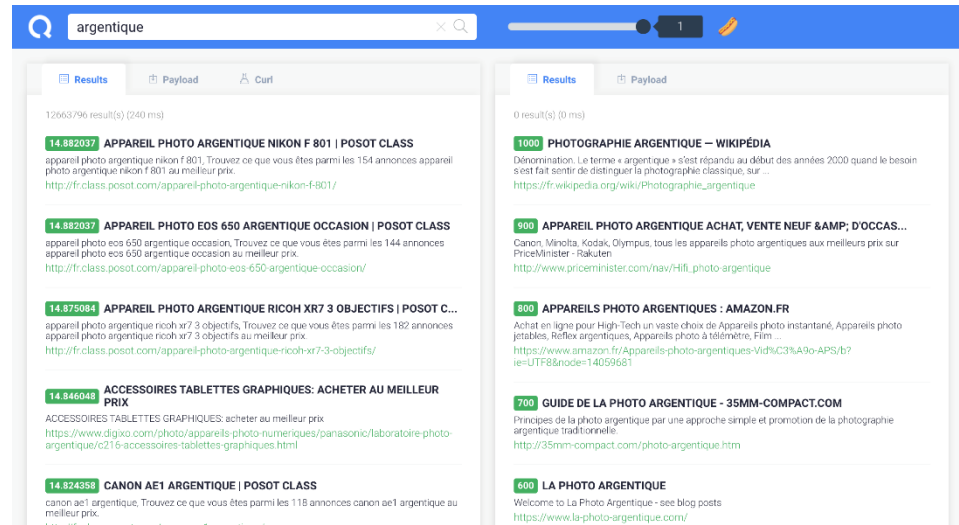

Search Engine innovation

Current status

- Demonstrator is available

Next steps

- Ranking
- Infrastructure deployment for beta and testing

Maps to be the foundation of our next steps to serve people

...by making them aware of where they are, where they live, what is happening in their area, Qwant is creating a new layer of understanding.

Maps back-end is made of:

- Tile server
- Geocoder
- POIs
 - Information
 - Advertisements
- Itinerary
- Navigation (Mobile)

in

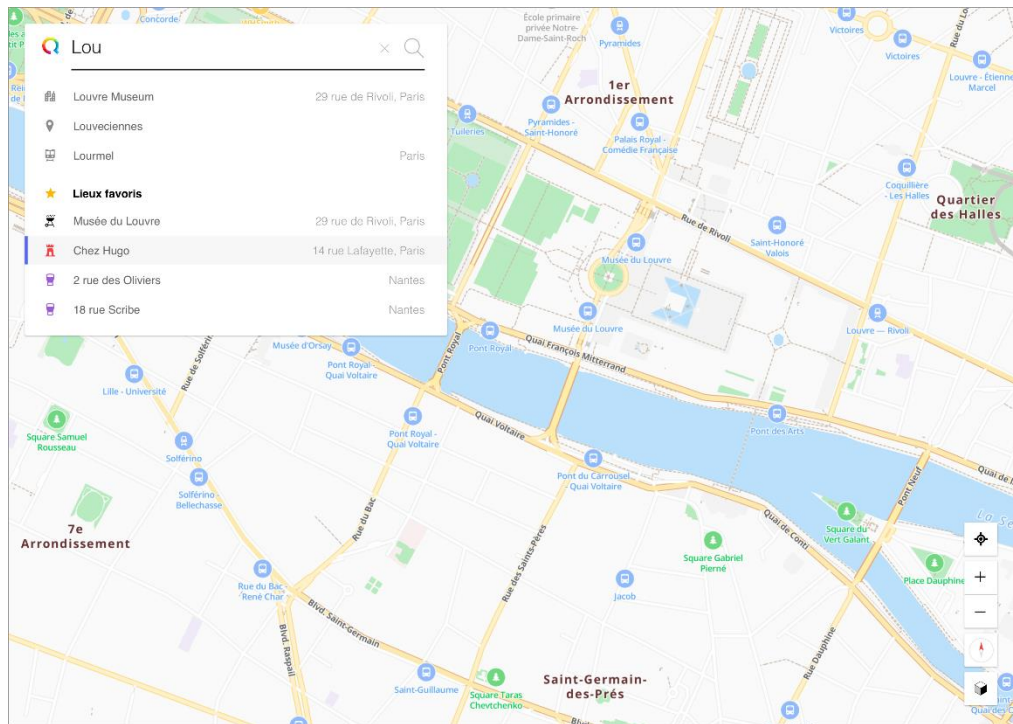

Chez Fan Fan

L'Aventure A Vélo

Collège La Grange

Qwant maps

Desktop Front-End (WIP)

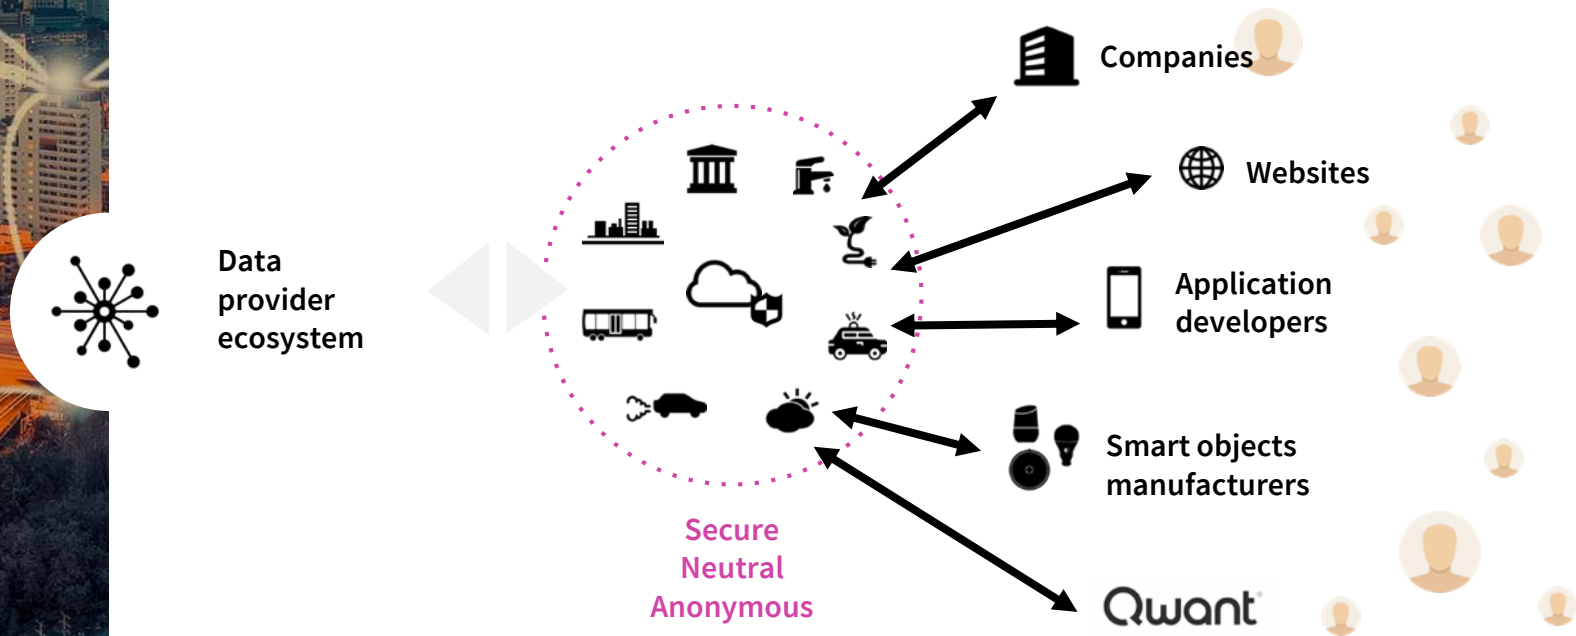

Qwant IoT aims at extending Qwant search answers with data of any kind

...temperature, air quality, parking availability, trafic,
noises polution, and much more...

IoT current status

Qwant with open source Kuzzle

- The platform is currently in deployment status, it is fed with Netatmo data, Air pollution provided by European Environnement Agency and soon with A2A smart cities lab data.
- Our current plan is to dedicate the platform to non critical businesses where primary goal is to expose their data to Qwant search engine.
- Moving to pre-production and production is currently being worked on

To get rid of the user account and reverse the paradigm ...

... we create the self owned agent and we call it:

masQ
by Qwant®

In the land of privacy we believe there is a new story to tell to our users, a story where advertisements are respectful of their life ...

Natural Language Processing

The **Natural Language Processing (NLP)** seen as a **key** for the Qwant **Search Engine**, which guaranty **user's privacy**.

NLP approaches are mainly based on **Deep Learning** algorithms.

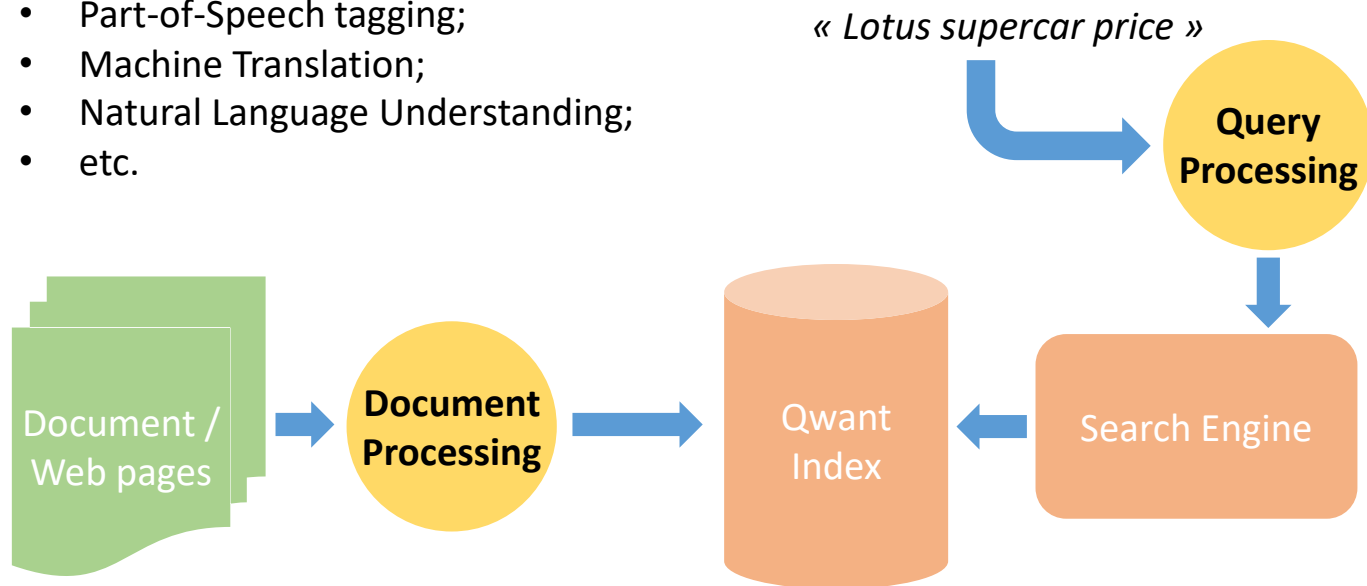

Natural Language Processing

Integration into the search engine in **document** and **query processing** such as:

- Embeddings;
- Classification;
- Information Extraction;
- Part-of-Speech tagging;
- Machine Translation;
- Natural Language Understanding;
- etc.

Many challenges:

- Improve accuracy of Instant Answers
- Process queries in Natural Language
- Fake News detection
- Multilingual processing
- Keep safe user's privacy (restricted data, anonymization)
- Improve parental control (violence, porn, etc.)
- ...
- and many other exiting research!

Qwant Research at TALN / CORIA:

- Christophe SERVAN – Lead NLP & Research Scientist
- Estelle Maudet – Research Engineer
- Oralie Cattan – PhD Student
